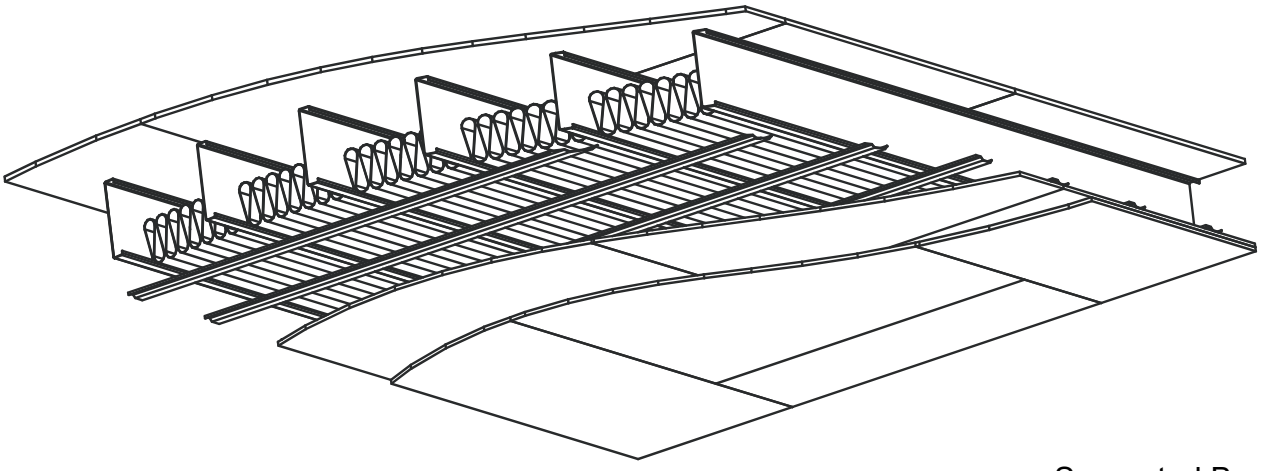
Steel Framing Alliance™

Steel. The Better Builder.

A GUIDE TO FIRE & ACOUSTIC DATA FOR STEEL FLOOR, WALL & ROOF ASSEMBLIES

(August 2009)



Supported By:

SSMA

DISCLAIMER

The material in this guide has been prepared as a reference of fire and sound rated lightweight steel framed assemblies. While every effort has been taken to ensure that the material is technically correct, it only offers a brief description of the tested assemblies. It must not be used without first reviewing the source documents of the testing agencies for a full description of the assembly. The Steel Framing Alliance, nor their organization's members, warrant or assume liability for the suitability of the material for any general or particular use.

Please note that some assemblies are constructed with proprietary products that may not be available in all geographical areas. Please consult the source documents of the testing agencies for these details. Where fire rated designs utilize a proprietary steel joist, fluted unit, light gauge steel truss or steel stud, the source column appears shaded and the word proprietary is in bold font to allow ease of identification for an assembly built with a proprietary cold formed steel product.

PREFACE

The purpose of this guide is to amalgamate fire and sound data for steel floor, wall and roof assemblies that are relevant to residential and light commercial construction. Fire data has been compiled from the following six sources:

Underwriters' Laboratories of Canada — ULC
7 Underwriters Road
Toronto, Ontario, Canada M1R 3B4
www.ulc.ca

National Research Council of Canada — NRCC
Institute for Research in Construction
1200 Montreal Road
Ottawa, Ontario, Canada K1A OR6
www.irc.nrc-cnrc.gc.ca

Underwriters Laboratories Inc. — UL
333 Pfingsten Road
Northbrook, Illinois, U.S.A. 60062-2096
www.ul.com

Gypsum Association — GA
6525 Belcrest Rd.
Suite 480
Hyattsville, Maryland, U.S.A. 20782
www.gypsum.org

Factory Mutual Global Research — FM
FM Global Corporate Offices
1301 Atwood Ave.
PO Box 7500
Johnston, Rhode Island, U.S.A. 02919
www.fmglobal.com

Intertek Group plc — Intertek
25 Savile Row
London, United Kingdom W1S 2ES
www.spec-direct.com

NOTES

1. ULC Design Numbers (published in the Fire Resistance Directory of Underwriters' Laboratories of Canada) and NRCC Report/Assembly Numbers (research publications of the Institute for Research in Construction, National Research Council of Canada) should be referenced when considering steel floor, wall and roof assembly designs in Canadian Building Code jurisdictions.

2. For non-load bearing wall assemblies, steel stud thickness as per ASTM C 645, Standard Specification for Nonstructural Steel Framing Members, where minimum thickness is specified as 0.0179 in. (0.455 mm) before application of protective coating or in conformance with Section 9.

3. The majority of sound data that has been incorporated into this guide were based on the following report:

   Warnock, A.C.C., *Estimation of Sound Transmission Class and Impact Insulation Class Rating for Steel Framed Assemblies*, Report No. B3436.1 Revised, Institute for Research in Construction, National Research Council of Canada, Ottawa, Ontario, Canada, December 2008.

   The above report has surveyed existing published sound test reports denoted in the source column by an alphanumeric acoustic test identifier. Letter prefixes in the identifier denote various acoustic testing laboratories. The report also provides numerous acoustic "estimates" and these have been noted with an asterisk that refers to the above report, i.e., Warnock (2008). The report is available as a Steel Framing Alliance Research Report (RP08-7) from the their website (http://store.steelframingalliancestore.com/esofsotrclan.html) as a free download in the form of an Adobe Acrobat file. Acoustic estimates were made with an acoustic "SOund Classification RATing EStimator" called "Socrates" that is available from the National Research Council of Canada via the following website:

   http://irc.nrc-cnrc.gc.ca/ie/floors/socrates_e.html

   Further information on "Socrates" is also available via the following website:

   http://www.alfwarnock.info/sound/socindex.html

   Acoustic data in some cases appears with the following codes to denote a material:

   AIR – a gap in the construction (a layer of air with thickness)
   CAR-UND – carpet and underpad
   CEMBRD – cement board (with thickness)

NOTES (continued)

G – gypsum board (with thickness)
GFB – glass fiber batts (with thickness)
NI – no insulation
NRC – no resilient metal channels
RC - resilient metal channels
RFB – rock fiber (mineral wool) batts (with thickness)

4. Information on UL fire rated cold-formed steel truss assemblies is available from the Cold-Formed Steel Council via the following webpage:

   http://www.cfsc.sbcindustry.com/docs/Fire_Assemblies_SSC.pdf

5. Details of UL and ULC listings for fire rated floor, wall and truss assemblies can be downloaded from the website of UL and ULC by using the alphanumeric fire identifier within a keyword search. For example, on the UL website enter the following information:

   - go to UL website at: http://www.ul.com
   - click on “Certifications” located along left side of webpage
   - type in alphanumeric fire identifier, for example “L568” in keyword box and click on “Search”
   - go to row with “Design No. L568” and click on “*BXUV.L568”*

   Similarly for the ULC website enter the following information:

   - go to ULC website at: http://www.ulc.ca
   - click on “Online Directories” located along top of webpage
   - on the “Online Directories” webpage, click on “ULC Online Directories”
   - in “Keyword” type in alphanumeric fire identifier, for example “M511” in keyword box and click on “Search”
   - go to row with “Design No. M511” and click on “*BXUVC.M511”*

6. UL Floor and Load Bearing Wall Designs using cold-formed steel joists and studs can be used for Canadian application without a Load Restriction, i.e., a “Load Restricted Factor” equal to 1.00. Details regarding this restricted load use condition have been added to “*BXUV7.GuideInfo, Fire Resistance Ratings - CAN/ULC-S101 Certified for Canada”.* The percent load reductions in Table 1 of “*BXUV7.GuideInfo”* for typical assemblies are based upon loading calculated in accordance with the working stress design method as compared to loading calculated in accordance with the limit states design method. The fire resistance ratings for floors supported by cold-formed steel channels and walls supported by cold-formed steel studs do not have a Load Restriction Factor because the

NOTES (continued)

associated loads in Canada and the U.S. are based on the same standard: *CSA S136-07, "North American Specification for the Design of Cold-Formed Steel Structural Members"*, and *ANSI/AISI S100-07,* "*North American Specification and Commentary for the Design of Cold-Formed Steel Structural Members"*.

7. As per UL's "*BXUV.GuideInfo, Fire Resistance Ratings – ANSI/UL 263"* and ULC's "*BXUVC GuideInfo, Fire Resistance Ratings (Guide No. 40 U18)*" the dimensions and thickness (gauge) of steel studs and joists are minimums. The hourly ratings apply when the steel studs and joists are larger in thickness (heavier gauge) and/or have larger dimensions than specified in a design, or when the member spacing is less than what was tested.

8. UL non-load bearing wall and load bearing wall assemblies provide stud material thickness with a Manufacturers' Standard Gauge (MSG) number. UL's "*BXUV.GuideInfo, Fire Resistance Ratings – ANSI/UL 263"* provides the following thickness tables where an MSG is stated in the fire rated design.

   For load-bearing steel studs:

MSG	Minimum bare metal thickness (in.)
20	0.0329
18	0.0428
16	0.0538
14	0.0677

   For non-load bearing steel studs:

MSG	Minimum bare metal thickness (in.)
25	0.018
24	0.021
22	0.027
20	0.033
18	0.044
16	0.055

ACKNOWLEDGEMENTS

The Steel Framing Alliance acknowledges Bill Kraft of the Steel Framing Alliance and George Frater of the Canadian Steel Construction Council as the Primary Authors of the first edition of this guide, which was published in 2004.

The Steel Framing Alliance is grateful to George Frater of the Canadian Steel Construction Council for his ongoing effort to keep this guide current and to serve as Primary Author of each of the updated editions, which were published in 2005, 2006, 2007 and 2009.

The Steel Framing Alliance also appreciates the guidance and feedback provided to the Primary Author by the members of the Fire and Acoustic Task Group of the Cold-Formed Steel Engineers Institute.

Acknowledgement is also made for the financial support provided by the Steel Stud Manufacturers Association for the NRCC Phase II joint research project on the Fire and Acoustical Performance of Floor Assemblies.

		2 h	52

NOTE: ULC Certification Bulletin No. 2003-08 (dated August 21, 2003) provides an official ULC permission for ULC listed and package labelled mineral fibre building insulation (processed from rock, slag and glass only) to be used in ULC non-load bearing wall assembly designs consisting of gypsum wallboard and steel or wood studs with a fire resistance rating not exceeding 2 hours when illustrated without insulation, without detracting from the rating assigned to the assembly.

ULC R500	• roof covering • foamed plastic insulation boards, 1" for 1h, 2" for 1½ h & 4" for 2h • gypsum sheathing min. 12.7 mm thick • steel roof deck corrugated or fluted, min. 0.76 mm thick • trusses spaced a max. 1220 mm o.c. • **proprietary** pre-fabricated light gauge steel truss system, Ultra-Span by Aegis Metal Framing • resilient or furring channels spaced 406 mm o.c. • 1 & 1½ hour - 1 layer of 15.9 mm gypsum board on ceiling side • 2 hour - 2 layers of 15.9 mm gypsum board on ceiling side	 1 h 1-½ h 2 h
ULC R501	• roof covering • nom. 18 mm thick wood structural panels • trusses spaced a max. of 1220 mm o.c. • **proprietary** pre-fabricated light gauge steel truss system, Ultra-Span by Aegis Metal Framing • min. 241 mm thick glass fibre insulation for 1½h, any thickness mineral wool or glass fibre insulation for 1 h, optional • resilient or furring channels spaced 406 mm o.c. • 1 hour - 1 layer of 15.9 mm gypsum board on ceiling side • 1½ hours - 2 layers of 15.9 mm gypsum board on ceiling side	 1 h 1-½ h

Source	Description	Fire Resistance Rating
UL P511	• crushed stone & roof covering • insulating concrete, min. 2” • foamed plastic insulation boards, thickness 1” to 8” • 28 MSG roof deck, $^{9}/_{16}$” deep • 7¼” x 18 MSG steel roof joist spaced 24” o.c. • furring channels spaced 24” o.c. • 2 layers of ½” gypsum board	 1 h
UL P512	• roof covering • 2 layers of 2 $^{7}/_{16}$” mineral & fiber boards • gypsum sheathing ½” thick • 28 MSG roof deck, $^{9}/_{16}$” deep • 7¼” x 18 MSG steel roof joist spaced 24” o.c. • 2 layers of ½” gypsum board	 1 h
UL P515	• roof covering • foamed plastic, mineral wool, glass fiber or perlite insulation boards, 1” min. thickness and no limit on max. overall thickness • gypsum sheathing ½” thick • steel roof deck corrugated or fluted, min. 28 MSG • trusses spaced a max. 24” or 48” o.c. • truss chord & web sections designed to AISI Specifications • resilient or furring channels spaced 24”o.c. • 2 layers of ⅝” gypsum board on ceiling side	 1 h

Source	Description	Fire Resistance Rating
UL P518	• roof covering • gypsum sheathing ½" thick • 28 MSG roof deck, $^{9}/_{16}$" deep • 8" x 18 MSG steel roof joist spaced at 24" o.c. • 8" thick glass fiber insulation • 2 layers of ½" gypsum board	 1 h
UL P521	• roof covering • foamed plastic insulation boards, 1" for 1h, 2" for 1½ h & 4" for 2h • gypsum sheathing min. ½" thick • steel roof deck corrugated or fluted, min. 22 MSG • trusses spaced a max. 48" o.c. • **proprietary** pre-fabricated light gauge steel truss system, Ultra-Span by Aegis Metal Framing • resilient or furring channels spaced 16"o.c. • 1 & 1½ hour - 1 layer of ⅝" gypsum board on ceiling side • 2 hour - 2 layers of ⅝" gypsum board on ceiling side	 1 h 1-½ h 2 h

Source	Description	Fire Resistance Rating
UL P523	• roof covering • nom. $^{23}/_{32}$" thick wood structural panels • trusses spaced a max. of 48" o.c. • **proprietary** pre-fabricated light gauge steel truss system, Ultra-Span by Aegis Metal Framing • min. 9½" thick glass fiber insulation for 1½h, any thickness mineral wool or glass fiber insulation for 1 h, optional • resilient or furring channels spaced 16"o.c. • 1 hour - 1 layer of ⅝" gypsum board on ceiling side • 1½ hours - 2 layers of ⅝" gypsum board on ceiling side	 1 h 1-½ h
UL P524	• roof covering • gypsum sheathing ½" thick • steel roof deck corrugated or fluted, min. 28 MSG • trusses spaced a max. 24" or 48" o.c. • truss chord & web sections designed to AISI Specifications • resilient or furring channels spaced 24"o.c. • 8" thick glass fiber insulation • 2 layers of ⅝" gypsum board on ceiling side	 1 h

Source	Description	Fire Resistance Rating
UL P525	• roof covering • foamed plastic insulation boards, no minimum for 1h, 2" for 1½ h & 4" for 2h • gypsum sheathing min. ½" thick • steel roof deck corrugated or fluted, min. 22 MSG • trusses spaced a max. 48" o.c. • **proprietary** pre-fabricated light gauge steel truss system, TrusSteel by Alpine Engineered Products, Inc. • resilient or furring channels spaced 16"o.c. • 1 & 1½ hours - 1 layer of ⅝" gypsum board on ceiling side • 2 hours - 2 layers of ⅝" gypsum board on ceiling side	 1 h 1-½ h 2 h
UL P526	• roof covering • nom. $^{23}/_{32}$" thick plywood sheathing • trusses spaced a max. 24" or 48" o.c. • **proprietary** pre-fabricated light gauge steel truss system, TrusSteel by Alpine Engineered Products, Inc. • resilient or furring channels spaced 16"o.c. • min. 9½" thick mineral wool or glass fiber insulation for 1½h, any thickness mineral wool or glass fiber insulation for 1 h, optional • 1 hour – 1 layer of ⅝" gypsum board on ceiling side • 1½ hours - 2 layers of ⅝" gypsum board on ceiling side	 1 h 1-½ h

Source	Description	Fire Resistance Rating
UL P527	• roof covering • foamed plastic insulation boards, no minimum for 1h & 2" for 1½ h • gypsum sheathing min. ½" thick • steel roof deck corrugated or fluted, min. 22 MSG • trusses spaced a max. 48" o.c. • **proprietary** pre-fabricated light gauge steel truss system, Amkey System by Allied Studco • resilient channels spaced 16"o.c. • 1 layer of ⅝" gypsum board on ceiling side	 1 h 1-½ h
UL P528	• roof covering • nom. $^{23}/_{32}$" thick plywood sheathing • trusses spaced a max. 24" or 48" o.c. • **proprietary** pre-fabricated light gauge steel truss system, Amkey System by Allied Studco • resilient channels spaced 16"o.c. • mineral wool or glass fiber insulation • 1 layer of ⅝" gypsum board on ceiling side	 1 h

Source	Description	Fire Resistance Rating
UL P532	• roof covering • foamed plastic insulation boards, no minimum for 1 h, 2" for 1½ h & 3" for 2 h • gypsum sheathing min. ½" thick • steel roof deck corrugated or fluted, min. 22 MSG • trusses spaced a max. 48" o.c. • **proprietary** pre-fabricated light gauge steel truss system, Strong-Span by Hexaport International Ltd. • resilient channels spaced 16"o.c. • 1 layer of ⅝" gypsum board on ceiling side	 1 h 1-½ h 2 h
UL P534	• roof covering • nom. $^{23}/_{32}$" thick wood structural panels • trusses spaced a max. 48" o.c. • **proprietary** pre-fabricated light gauge steel truss system, Strong-Span by Hexaport International Ltd. • resilient or furring channels spaced 16"o.c. • min. 9½" thick glass fiber insulation for 1½ h, any thickness mineral wool or glass fiber insulation for 1 h, optional • 1 hour - 1 layer of ⅝" gypsum board on ceiling side • 1½ hours - 2 layers of ⅝" gypsum board on ceiling side	 1 h 1-½ h

Source	Description	Fire Resistance Rating
UL P536	• roof covering • foamed plastic insulation boards, no minimum for 1 h, 1" for 1½ h & 2.6" for 2 h • gypsum sheathing min. ½" thick • steel roof deck corrugated or fluted, min. 22 MSG • trusses spaced a max. 48" o.c. • **proprietary** pre-fabricated light gauge steel truss system, Gus Truss by Nucon Steel Corporation • resilient channels spaced 16"o.c. • 1 & 1½ hours - 1 layer of ⅝" gypsum board on ceiling side • 2 hours - 2 layers of ⅝" gypsum board on ceiling side	 1 h 1-½ h 2 h
UL P537	• roof covering • nom. $^{23}/_{32}$" thick wood structural panels • trusses spaced a max. 48" o.c. • **proprietary** pre-fabricated light gauge steel truss system, Gus Truss by Nucon Steel Corporation • resilient or furring channels spaced 16"o.c. • min. 9½" thick glass fiber insulation for 1½ h, any thickness mineral wool or glass fiber insulation for 1 h, optional • 1 hour - 1 layer of ⅝" gypsum board on ceiling side • 1½ hours - 2 layers of ⅝" gypsum board on ceiling side	 1 h 1-½ h

Source	Description	Fire Resistance Rating
UL P540	• roof covering • foamed plastic, mineral wool, glass fiber or perlite insulation boards, no min. thickness and no limit on max. overall thickness • gypsum sheathing min. ½" thick • steel roof deck corrugated or fluted, min. 22 MSG • trusses spaced a max. 48" o.c. • **proprietary** pre-fabricated light gauge steel truss systems, 1. Ultra-span by Aegis Metal Framing 2. Amkey System by Allied Studco 3. Versa-Truss by Dale/Incor 4. Strong-Span by Hexaport International Ltd. 5. Gus Truss by Nucon Steel Corporation 6. TrusSteel by Alpine Engineered Products • resilient or furring channels spaced 16"o.c. • any thickness mineral wool or glass fiber insulation • 1 layer of ⅝" gypsum board on ceiling side	 1 h

Source	Description	Fire Resistance Rating
UL P541	• roof covering • foamed plastic, mineral wool, glass fiber or perlite insulation boards, 1” min. thickness and no limit on max. overall thickness • gypsum sheathing ½” thick • steel roof deck corrugated or fluted, min. 28 MSG • trusses spaced a max. 24” or 48” o.c. • truss chord & web sections designed to AISI Specifications • resilient channels spaced 24”o.c. • 2 layers of ⅝” gypsum board on ceiling side	 1 h
UL P546	• roof covering • foamed plastic insulation boards, 1” min. thickness and no limit on max. overall thickness • gypsum board ½” or ⅝” thick • 22 MSG roof deck, $^{9}/_{16}$” deep • 9¼” x 16 MSG **proprietary** steel joist (Dietrich Industries Inc.) spaced at 24” o.c. • resilient channels spaced 12” o.c. • any glass fiber insulation, min. 3½” and max. 6¼” thick • 1 layer of ⅝” gypsum board on ceiling side	 1 h
